StreetBite V1.0

Street food, found fast

From brief to beta in four steps

1. Plan

Brief split into Clean Architecture layers, Firebase setup and 12 feature branches.

2. Build

Flutter with Bloc and Cubit, GetIt, Dio with caching, Firestore, English and Arabic.

3. Test

Manual cases tracked in Jira and an Appium suite on an emulator and a real phone.

4. Ship

Release APK sent to beta testers through Firebase App Distribution.

What the app does

Discover

Live meals from TheMealDB in a banner, a Hot Offers row and a two-column grid.

Order

Cart with cash or card payment, orders saved to Firestore.

Favourites and profile

Saved meals, photo, device details and fingerprint lock.

Vendor map

Six vendors across Egypt with name, cuisine and rating.

English and Arabic

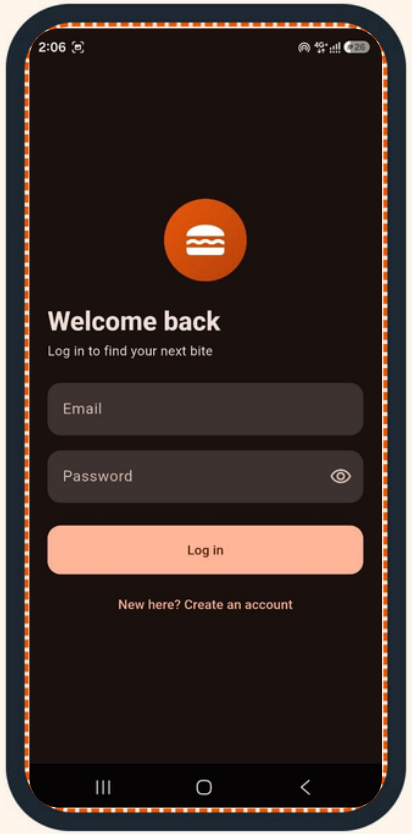

Runtime language switch with right to left layout, plus light and dark themes.

Works offline

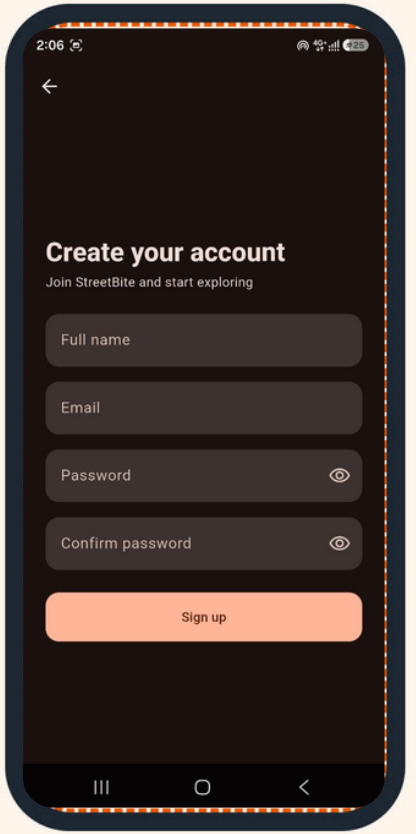

Cached meals and friendly error messages instead of crashes.

Authentication

- Email and password login with Firebase Authentication
- Sign up checks a capital first letter, email, 6+ character password and confirmation
- Friendly messages for wrong passwords and network errors
- Session survives an app restart, managed by AuthCubit
- User model created with the Builder pattern

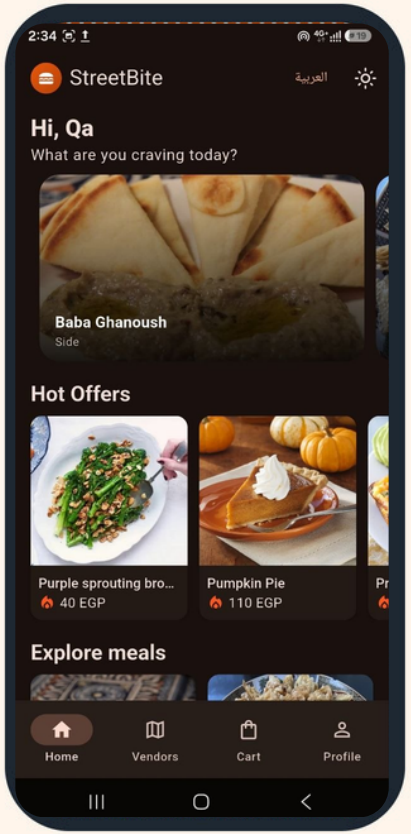

Login

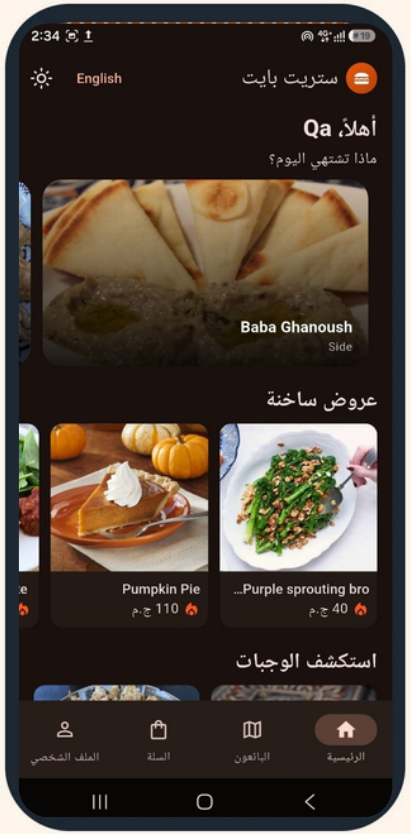

Sign up

Home and live menu

- PageView banner of featured meals and a Hot Offers row of five
- Two-column grid with Add to Cart and a SnackBar
- Meals fetched with Dio and cached with shared_preferences
- Runtime English and Arabic switch, plus a dark theme toggle

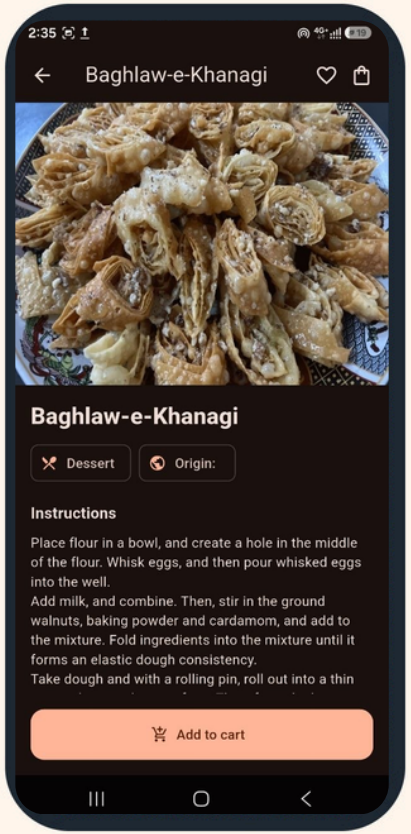

Home (English)

Home (Arabic)

Meal details

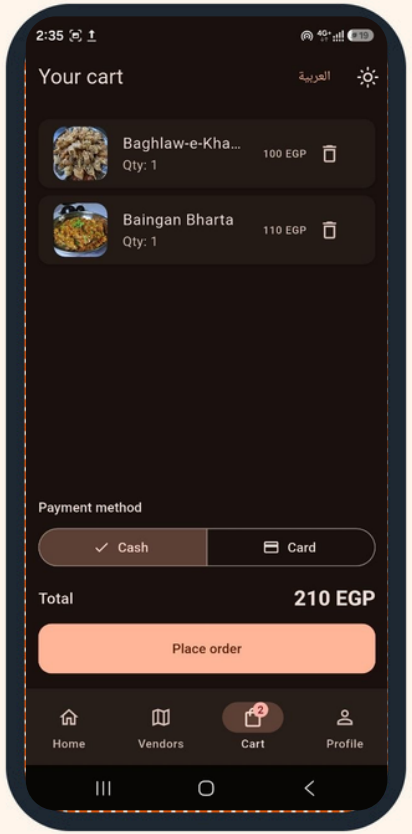

- Opens from any card, the meal passed as a navigation argument
- Image, name, category, origin and instructions
- Live cart count through BlocConsumer
- The heart saves a favourite in the user Firestore document

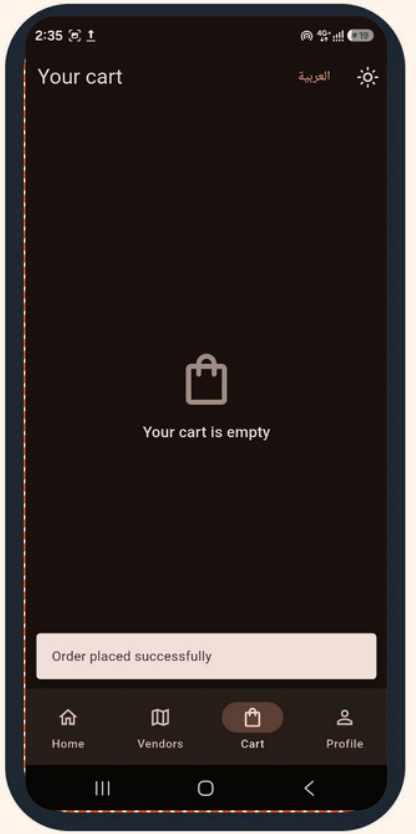

Meal details

Cart and orders

- BlocBuilder list with remove and a reactive total
- BlocListener shows a SnackBar when the cart empties
- Cash or Card through one PaymentProcessor interface
- Orders saved to Firestore, then the cart is cleared

Cart

Order placed

Nearby vendors

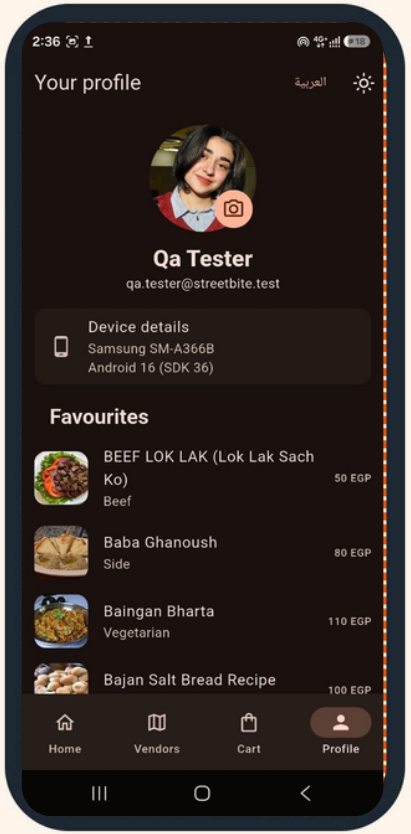

- Full-screen Google Map titled Nearby Vendors
- Six vendors in different cities
- Info window with name, cuisine and rating
- Texts follow the selected language

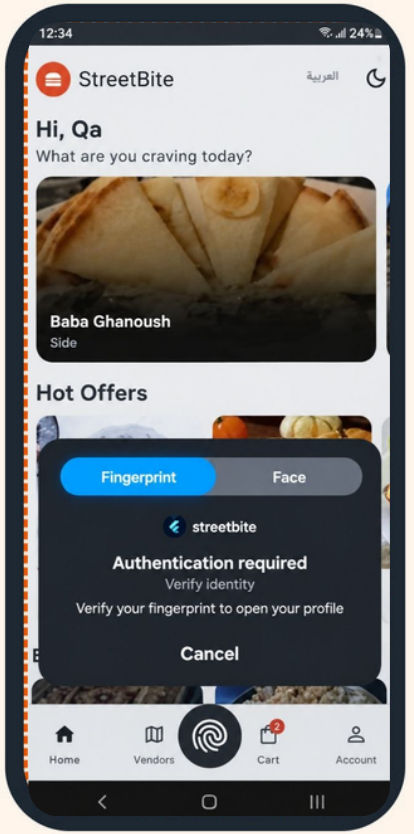

Vendor map

Profile and device

- Fingerprint required before the screen opens
- Photo picked from the gallery and stored in Firestore
- Device model and Android version shown
- Live favourites and order history

Profile

Fingerprint prompt
